Notes Before Waterloo

Martin Stelmach

October 24, 2018

- Waterloo's #5 is the teams best 3-point shooter with 36.8% from behind the arc

- As a team Waterloo has only made 29 3's in their preseason with a 3-point percentage of 21.2%

- #4 Petrov is excellent at drawing fouls and has gone to the line 25 times shooting 76%

- Although there may not be enough data is seems they strictly rely on #42 for iso plays where he has a relatively average scoring percentage of 26%

- Waterloo ranks as the top team on a post up play which lead to a 48.3% scoring percentage or a 47.4% put back rate after missing the post of scoring opportunity

- Realistically the only players that will hold the ball will be #4 and #42

- As we stress importance on our players having active hands, Waterloo has one of the highest turnover % rates led the way by #5 with 24% and #4 with 20%

- Waterloo's offence may be one of the worst in the league but their defence is impeccable with almost every player ranking in the top percentile in the league in overall defence

- There is very little data to show defensive stats however the one flaw their defence is showing is off of baseline cut plays
